CAREER OBJECTIVE

I am quick learner with self-driven attitude, eager to tackle new challenges in **AI, ML, Deep Learning, and Computer Vision**. With hands-on experience in **Python, Tensorflow, and multiple libraries**, I am passionate about developing Ai-powered solutions for automation and industrial applications. I thrive in dynamic environments that encourage innovation, collaboration, and continuous learning, allowing me to contribute meaningfully while expanding my expertise in the tech world.

EDUCATION

Dr. S. & S. S. Ghandhy Government Engineering College | Surat 2022 - 2025
Bachelor of Engineering in **Electronics & Communication**
CGPA: 7.69

Tapi Diploma Engineering College | Surat 2019 - 2021
Diploma of Engineering in **Automobile Engineering**
CGPA: 7.7

Gujarat Secondary & Higher Secondary Education Board 2019
Secondary Education 10th Standard
Percentage: 60

WORK EXPERIENCE

Jalaram Hyundai Motor India Ltd. JUN 2021 - SEP 2021

- I have practical experience in diagnosing, repairing, and maintaining vehicles. This includes tasks such as engine repair, brake system servicing, oil changes, tire replacements, and performing regular vehicle inspections.
- Also take knowledge about Hybrid system require understanding of both mechanical and electrical aspects.
- Work on ADAS technologies like parking sensors, cameras, radar, and LiDAR for vehicle safety and automation.

Sky Infoway JUN 2024 - JULY 2025

- Developed Python skill, working on hands-on projects related to automation, data processing, and scripting.

L&T Heavy Engineering JAN 2025 - APR 2025

- Conducted data processing to extract insights on object patterns, orientation, and measurements.
- Designed and developed an AI-powered computer vision system to detect and classify objects in real-time using a custom-trained YOLOv8 model.
- Integrated object detection with detection with dimension measurement (length and width) to support automated decision-making for robotic welding tasks.
- Converted Python-based detection pipeline into a standalone executable (.exe) for easy deployment on Windows systems in factory environments.

PROJECT

- Automatic Door Lock System**
Developed an automatic door lock system using the NodeMCU board and programmed in C.

- **Data Analysis & Computer Vision**

Developed an AI-powered system to analyse object usage patterns and detect object types using deep learning and computer vision. Implemented YOLO-based Object detection to classify objects on-screen, enhancing automation in industrial environments. Improved robot performance through data analysis using Excel and Python libraries. Deployed the solution as a standalone Executable (.exe) file for seamless use on Windows systems.

SKILLS

- Python (Pandas, Numpy, Scikit-learn, OpenCV, Matplotlib)
- SQL
- Tableau
- Deep Learning
- Computer Vision
- AI | ML
- Microsoft Excel
- Web Development
- Graphics design
- Automotive design
- Vehicle Inspection & Repair
- Communication skills
- Problem Solving

LANGUAGE

- English (Native proficiency)
- German (Full proficiency)
- Gujarati (Native proficiency)
- Hindi (Limited working proficiency)
